- Use of the Annexin V protein or an N-terminal fragment of Annexin V, optionally in the form of a salt, in the manufacture of a pharmaceutical composition to prevent atherothrombosis and/or plaque rupture.
- The use according to claim 1 wherein the pharmaceutical composition
 comprises an effective amount of the Annexin V protein or N-terminal fragment of Annexin V, optionally in combination with a carrier and additives.
- 3. The use according to claim 1 or claim 2 wherein the effective amount of the Annexin V in the pharmaceutical composition is determined from a diagnostic status analysis of the Annexin V-endothelium binding.
 - 4. A method of treating a subject at risk of atherothrombosis and/or plaque rupture, comprising administering to said subject a pharmaceutical composition comprising an effective amount of Annexin V or N-terminal fragment of Annexin V or its corresponding salt.
 - 5. A method according to claim 4 where the subject at risk is a systemic lupus erythematosus (SLE) patient.
 - 6. Use of a purified subfraction of pooled immunoglobulins with the capacity to inhibit antibodies binding to Annexin V, or a purified subfraction of pooled immunoglobulins with the capacity to promote binding of Annexin V to endothelium, in the manufacturing of a medicament to prevent atherothrombosis and/or plaque rupture.

- 7. Use of a commercially available pooled immunoglobulin preparation in the manufacturing of a medicament to prevent atherothrombosis and/or plaque rupture.
- 8. A method of treating a subject at risk of artherothrombosis and/or plaque rupture, comprising administering to said subject a pharmaceutical composition comprising an effective amount of pooled immunoglobulins or a purified subfraction of pooled immunoglogulins.
- 9. A method according to claim 8, or a use according to claim 6 of claim 7, where the subject at risk is a systemic lupus erythematosus (SLE) patient.

15

- 10. A use or method according to any one of of the preceding claims for preventing atherothrombosis and/or plaque rupture in a human.
- 11. A use or method according to any one of of the preceding claims for preventing atherothrombosis and/or plaque rupture in a patient with vulnerable plaques.
